

EIPARTSMANAGER – SPARE PARTS MANAGEMENT SYSTEM

Spare Part Management System helps factories manage their spare parts by providing detailed comparisons of spare parts cost, inventory, life-cycle and track historical performance.

EIPartsManager Provides Actionable Data with Detailed Tracking & Comparison of -

- Spare parts cost between equipment of same or different types
- Life-cycle of spare parts from multiple suppliers (Graphical)
- Life of any part vs similar part in the past on the same or different equipment.

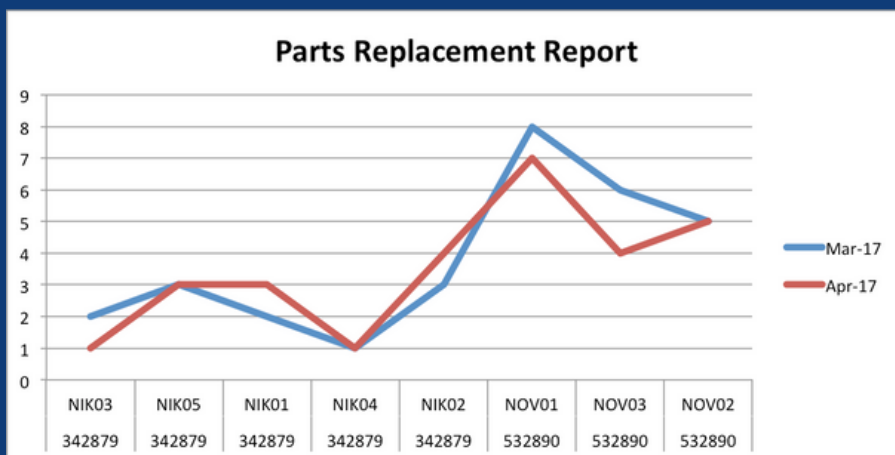

Help reduce spare parts costs by as much as 10% annually

Tracks life of spare parts across equipment and against its own historical life

Integrates with factory's ERP/MES

1. Tracks life of a spare part on the equipment
2. Flags for parts that are under warranty
3. Alerts for systemic equipment issues
4. Calculates and compares equipment maintenance cost
5. Tracks parts that are sent for repair or refurbishments
6. Track cost of spare parts on each equipment and compares against other equipment of the same kind
7. Maintain inventories of spare parts, so you never run out of any parts

8. Track the life of each spare part and compare it against that of others used on the same equipment or others of the same type, either from the same or different manufacturers/suppliers
9. Helps detect systematic issues in the equipment
