

EIGEMSim

EIGEMSim is a SECS/GEM simulator software that is used for testing SECS/GEM compliance of your equipment software. It simulates Factory Host with most SECS messages that are used for testing pre-bundled.

Benefits

Time is money
Save months in software development costs as EIGEMSim can be easily integrated into your existing equipment software

Efficient
Lightweight and efficient, EIGEMSim is highly optimized and easy on the CPU, leaving good headroom for other tasks on Equipment software

Future-ready
Contains all the features that SECS/GEM has to offer, so you can take advantage of them at any time

Integration services
We leverage our expertise to understand your requirements and provide you with an integration service that works best for you

Multi-Platform
Runs effectively on any platform such as Windows, Linux/Unix and Android

Trusted By
Tier-1 fabs across the world

Case Study

Most of our customers are using EIGEMSim without any training or manual reading at all, it's that intuitive!

Features

- Configurable to simulate factory host or equipment
- Multi-platform support - Linux/Unix or Windows
- Intuitive UI for configuring and sending SECS messages
- Comes bundled with most SECS messages needed for testing
- Logs of all incoming and outgoing SECS messages
